Project Summary

Summary Information

Project Title: Test Classic
Project ID: 12341
REDCap Created: 2025-06-12
Data Last Updated: 2026-05-03 16:23:37.418804

Notes: Test project for API

Missing Codes:

code	name
NI	No information
UNK	Unknown
UNC	Unencoded
NA	Not applicable

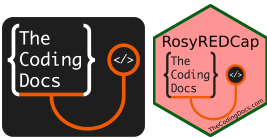

Instruments: 3
Variabes: 45 (48 if you count checkboxes individually)

Data

Records: 50
Last Data Change: 2026-05-02 08:24:00
Last Metadata Change: NA

About RosyREDCap and REDCapSync

R and REDCap are both widely used in clinical research, but integrating them efficiently remains a challenge.

REDCapSync is a project-agnostic R package that retrieves and maintains complete REDCap datasets using an API-efficient, log-based approach—only updating what has changed. Each project is standardized into an R6 object for downstream analysis.

RosyREDCap is a companion Shiny application that enables users to explore, deidentify, and visualize REDCap data without writing code. The R package also exports functions where the REDCapSync objects are used at inputs.

Together, these tools allow clinical teams to build reproducible data pipelines and easily distribute clean datasets—without needing deep knowledge of the REDCap API.
